Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Notes on the Northern Black Hills of South Dakota These schists are upturned at high, often vertical angles, while over them unconformably, and dipping gently towards the horizon is the quartzite in its various forms; sometimes apparently undisturbed, and at others broken or brecciated, as it is often called (i.e, shattered into angular fragments and re-cemented without very great displacement of the parts) by the numerous porphyry dikes which intersect all the exposed measures from the lowest to the highest, and form a part of the elevations or hills of the region. These latter are without question eruptive, and bear evidence of having been ejected during at least two and probably several different epochs, for I have observed porphyry in places intersecting older masses of similar porphyry, which, in their turn, have produced earlier disturbances in the strata. The same paper contains a geological section taken from the equally admirable and earlier contribution of Walter B. Devereux, on The Occurrence of Gold in the Potsdam Formation, Black Hills, Dakota (Trans., x. 465). The first systematic study of this region was made by Dr. F. V. Hayden, in 1870, and resulted in the geological definition of the large divisions of the Hills much as they are accepted to-day. Since then the Government has had the very full report on the geology and resources of the Black Hills by Henry Newton and W. P. Jenney, 1875 (Report published in 1880). Still later Devereux, Blake, Headden, Hofman, Carpenter, Rickard, Farrish, Dr. McGillicuddy and others have published valuable contributions to our knowledge of the geology, mineral resources and chemical character of the ores of the Black Hills, which will...
