RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 268 pages. Dimensions: 9.7in. x 7.4in. x 0.6in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1900 Excerpt: . . . occurrence of Siamese twins does to the general idea that the human species is represented by separate individuals. This form of objection has certainly shown itself to be trivial. A much more serious obstacle comes from the work associated with the name of Apathy. This investigator has developed methods which in point of perfection exceed the Golgi Flc. 4. --Posterior view of a transverse section of the ventral nerve chain of a leech (modified from Apathy). The median plane of the leech is represented by D (dorsal), V (ventral). On the left side (), the nervous elements are represented according to the neurone theory, a sensory neurone being represented in solid black, and a motor one dotted. On the right side 1V the nervous elements are represented according to Apathy. The neurofibrils begin in or between the integumentary epithelial cells (), from which they pass centrally into sensory ganglion cells (S) or motor ganglion cells (M). From the latter, coarse neurofibrils pass peripherally to muscles. The neurofibrils are produced by nerve cells, a nucleus of one of which is shown at A7. and the methylen-blue methods as much as these surpassed the ones before them. Apathys methods do not outline neurones; they differentiate the transmitting substance within the neurone. Instead of a coarse nerve fibre or ganglion cell colored homogeneously, one finds a clearly differentiated system of delicate fibrils that constitute collectively the transmitting apparatus of the nervous organs. The peculiarities of Apathys methods can be...
