

Mathematical questions with their solutions, from the Educational times Volume 33

Filesize: 6.91 MB

Reviews

An exceptional publication as well as the font employed was exciting to see. it was actually writtern extremely flawlessly and helpful. Once you begin to read the book, it is extremely difficult to leave it before concluding.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 30 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1881 Excerpt: . . . OF, OF are double tangents to a bicircular quartic, having (2) for a circle of inversion, and (3) for the corresponding focal conic. See Prof. Caseys paper on Bicircular Quartics, Art. 47 It remains to show that F, V are points of contact. If p be the perpendicular from O upon the asymptote, and r the distance from O of a point of contact of the double tangent OF; then, since the two points of contact are inverse with respect to (2), and are also equidistant from the asymptote $lpr - o2 0t y$. Now, taking the asymptote $2ox 2$ and $y y c - -2cx - 0, - -i2at 2B1 y c - 2ca OF - a3 g2 7. P 2 (-) 01 2OF$ hence F is one point of contact of the double tangent. The latter part may be otherwise proved as follows: --The sixteen points of contact of the eight double tangents of a bicircular quartic lie by fours upon four concentric circles; the common centre being the centre of the focal conies, and each circle cuts orthogonally one of the circles of inversion. Hence the points of contact of the double tangents OF and O B lie upon the circle and this circle evidently passes through F, F. 5083 and 5180. (By Prof. WolstenHolme, M. A.) --A bicircular quartic whose real foci lie on a circle is the locus of a point P, which moves so that the ratio AP. BP: CP. DP is constant, A, B, V, D being four...
