Excerpt: . . . each mouthful of food which we swallow is being put into shape for the villi, and that they use it or not without the slightest reference to our wishes in the matter. This indeed is true, and the number of these independent workers is counted by the hundred thousand and the million. Each separate one is a tiny finger-shaped structure, ready to absorb such chyle as shall meet its demand; each stands beside its neighbor, helping to make the soft, velvety lining of the twenty feet of tubing; each does its independent work, yet all are united in drawing nourishment from the chyle and in sending it on to the body through the blood. Just here certain facts should be reviewed and condensed: 1. It is through the lining of the small intestine that all substances must pass (whether proteid or carbohydrate, fat, water, or salt) which are to enter the blood from the food we swallow. 2. The villi are, in point of fact, the lining itself drawn up into slender tubes for the sake of increasing the surface against which the chyle must be pressed. 3. Food passes through the villi much as lymph and plasma pass back and forth through the sides of the tubes that carry blood. This food must therefore be very liquid, for the villi cannot absorb any solid substance. 4. The great object of peristaltic action is to wash the chyle up against the villi, that they...
