

Mathematical Foundations of Computer Science 1986

Filesize: 4.91 MB

Reviews

Most of these ebook is the perfect publication offered. Sure, it really is play, still an interesting and amazing literature. You wont truly feel monotony at whenever you want of your time (that's what catalogs are for about in the event you check with me).

(Roosevelt Rohan)

MATHEMATICAL FOUNDATIONS OF COMPUTER SCIENCE 1986

To download **Mathematical Foundations of Computer Science 1986** PDF, make sure you follow the hyperlink beneath and save the ebook or gain access to additional information that are in conjunction with MATHEMATICAL FOUNDATIONS OF COMPUTER SCIENCE 1986 ebook.

Springer Aug 1986, 1986. Taschenbuch. Book Condition: Neu. 235x155x35 mm. This item is printed on demand - Print on Demand Titel. Neuware - Why sometimes probabilistic algorithms can be more effective.- Recent results in the theory of rational sets.- Partial interpretations of higher order algebraic types.- Kins of context-free languages.- Algebraic theory of module specifications with constraints.- A semantical model for integration and modularization of rules.- Parallel arithmetic computations: A survey.- An approach to proof checker.- The promise of electronic prototyping.- Systolic arrays: Characterizations and complexity.- Geometric location problems and their complexity.- Developing implicit data structures.- Higher-order arrays and stacks in programming. An application of complexity theory to logics of programs.- Deterministic simulation of idealized parallel computers on more realistic ones.- Relational specifications and observational semantics.- Efficient testing of optimal time adders.- Properties of complexity measures for PRAMs and WARMs.- Iterative systems of equations.- Polynomial complexity of the Newton-Puiseux algorithm.- Unique decipherability for partially commutative alphabet (extended abstract).- The equivalence of finite valued transducers (on HDTOL languages) is decidable.- A fast parallel algorithm for six-colouring of planar graphs.- Quicksort without a stack.- Towards an efficient merging.- Homomorphic realization of automata with compositions.- Refined bounds on the complexity of sorting and selection in d - dimensional space.- On the inherent combinatorial complexity of geometric problems in d - dimensional space.- The evolution of two stacks in bounded space and random walks in a triangle.- P -genericity and strong p -genericity.- Fibonacci numeration systems and rational functions.- Safe implementation equivalence for asynchronous nondeterministic processes.- Grammars with context dependency restricted to synchronization.- Some improved parallelisms for graphs.- A complete inference system for an algebra of regular acceptance models.- Nondeterministic Turing machines with modified acceptance.- Remark on the power of compass.- Regular chain code picture languages of nonlinear descriptonal complexity.- An analysis of the nonemptiness problem...
