

## Microsoft Access 2010 Programming by Example

By Julitta Korol

Mercury Learning & Information. Mixed media product. Book Condition: new. BRAND NEW, Microsoft Access 2010 Programming by Example, Julitta Korol, With more than 275 applied examples and 10 projects, Access users can quickly build database solutions with ActiveX Data Objects (ADO), perform database tasks with Jet/Access Structured Query Language (SQL), and export/import Access data to and from XML both manually and programmatically. The book, which covers the latest release of Access and earlier versions, is divided into five parts: an introduction to VBA programming, manipulating databases with ADO, using DDL, event programming, and using ASP and XML. The text will show you how to write and debug your programming code with the Visual Basic Editor; understand and use common VBA programming structures such as conditions, loops, arrays, and collections; code a 'message box' and reprogram characteristics of a database; and, query and manipulate your database from a Web browser with Active Server Pages (ASP) and many more practical techniques. There are thirty-two chapters loaded with illustrated hands-on projects and exercises that demonstrate programming concepts. Each exercise/project tells you exactly where to enter code and how to debug it and then run it. This title includes a comprehensive CD-ROM with tips,...
